Packing and Crating

Your HOME-DOME or PRO-DOME will be shipped in parts and packed in a wooden crate. Each RoboDome is shipped fully assembled in a strong cardboard carton strapped to a pallet.

Our experience is that good packing greatly reduces the risk of shipping damage. Below is an example of a crated HD6T, first closed (but with packing straps removed) and with 3 sides opened.

Our normal packing is for motor freight shipping within North America and includes the dome, accessories, and hardware. International ocean freight requires the crate be constructed from specially treated wood and packing charges are slightly higher. Unusual purchase combinations, special orders, or custom shipping arrangements may affect the actual packing charges. Factory pickup saves packing and shipping charges, but Maryland sales tax (6%) and a \$50 assistance charge will apply.
