

This is released 5.2 of the DDW control program, the main modification of which now supports the TI/AAG Cloud Watcher. You **MUST** use Windows "Add/Delete Programs" function to uninstall all earlier versions of the DDW program **AND** delete the TI folder located in the "C:\Program Files folder" before installing this new version of DDW. Make sure that you write down or print out the DDW configuration information before deleting the "C:\Program Files" folder so it can be re-entered into DDW v5.2. program once it is installed.
